

## AGRITECH AND APP DEVELOPMENT FOR COMPANIES

HT Apps is a software house with **agritech** and **business app development** as its core business. The wealth of experience developed by HT Apps since 2004 has enabled it to develop user friendly **business management software** suitable for all businesses such as JO Hall and JOBy, the attendance tracking app that allows you to monitor the behaviour of your employees (entrances, exits, transfers) quickly and accurately.

HT Apps participates in national and international **research and development** projects, in cooperation with companies and organisations from all over Europe.

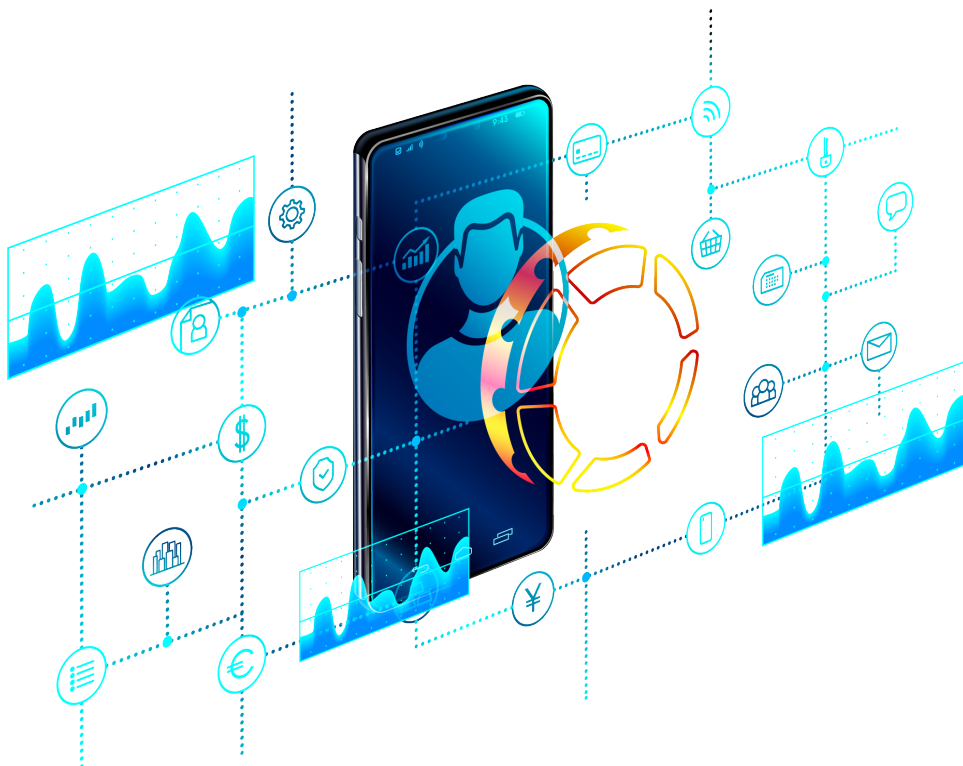

## AGRITECH

HT Apps is engaged in the development of digital solutions to improve the traceability processes of agrifood products and in the use of the latest innovations regarding sensor technology and artificial intelligence for agrifood, a leading sector of the made in Italy industry.

## APP DEVELOPMENT

HT Apps is able to combine ease of use with the stability of the solutions adopted. Behind a piece of software may lurk critical issues that are not always visible at first glance. In some cases, these may concern the design of the software, the writing of its code or other technical variables that are not perceptible to the uninitiated. Good reasons to choose HT Apps as a qualified partner or supplier.
